

# Remaining LDAP Integration Work

Leo Przybylski  
przybyls@arizona.edu

July 31, 2009

## 1 Overview

Some other work than development is required to integrate LDAP into KFS environments.

## 2 Integration Points

### 2.1 Conversion

#### 2.1.1 Requirements

Data required to be converted is

- between UAID and principalId (all data that is using false principal ids needs to be replaced with real uuids).
- removal of constraints between entities and principals.
- removal of entities.

#### 2.1.2 Work Done

Keiko has put together some scripts to do map between UAID and principalId in conversion.

### **2.1.3 Remaining Work**

- Scripts need to be run in a sandboxed environment like STG for verification
- ids for principals not found in the ZZ\_NETID table need to be retrieved.

## **2.2 EDS**

The work required here is to be done by the Integration Team.

### **2.2.1 Requirements**

Requires EDS to

- support multiple affiliations
- map campus code to affiliation
- map separate employeeId to an affiliation
- map separate department to an affiliation

### **2.2.2 Work Done**

Leo added some default values within KFS to account for required fields.

### **2.2.3 Remaining Work**

Nothing on this has been done yet with the official data in EDS. It still needs to be started. Leo contacted Duffy Gillman on the request process for this and is awaiting feedback.
